# Flip the Strap to Switch Shoulders

The strap system is reversible so you can carry it on either shoulder.

## 1. Flip Top Buckle

Unbuckle the top buckle of the shoulder strap. Flip it and snap it back in.

## 2. Swap Straps

Swap the two strap hookups located at the bottom corners of the bag.

## 3. Move the Small Buckle to the Front

Slide out the small buckle from the shoulder strap so you can put it onto the other side. This smaller strap doesn't ever need to be unbuckled.

Right Shoulder Setup (Default)

Left Shoulder Setup

# Fieldpiece HVACR Service Tool Bag

Congratulations. You've purchased a tool bag designed specifically for HVACR professionals. The single strap system is easy to get on and off, while the padded side pockets protect your test instruments and provide easy access.

The interior tool rack houses hand tools for easy access and quick visibility so missing tools don't get left behind. Special accessories include a magnetic tray, water bottle/ wasp spray strap, electrical tape strap, small plastic tray storage in bottom, and drill holster. All in a compact bag that fits snuggly to the body to fit in tight places like crawl spaces and ladder cages.

To get the most out of this bag, please take a few moments to see that "there's a place for everything and that everything has a place" for the most common HVACR tools used in the field -- everyday.

**Patent Pending**

# Load Your Tools

Store your test tools separate from your hand tools. The main compartment contains the tool rack for drivers and pliers. Pockets behind the rack hold your wrenches. The side pockets are padded with space for 2 meters on each side.

### Tool Rack & Side Pockets

The tool rack is labeled so you know where your tools go. The padded side pockets protect your Fieldpiece Instruments.

### Magnetic Tray

Hold cabinet screws, nuts, and washers on the top of your bag.

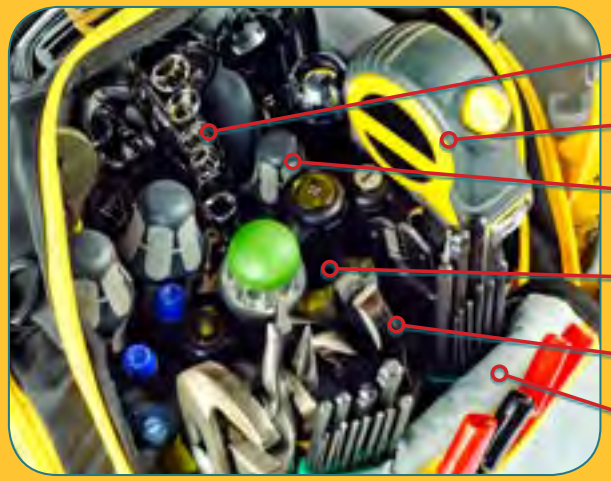
### Drill Cinch

Open the cinch strap and connect to your drill handle.

### Water Bottle Strap

Adjust the Velcro strap and cinch your water bottle or wasp spray.

## Loaded Tool Rack



**Pockets Behind Rack**
Wrenches, ratchet sets

**Side Panel Top**
Tape measure

**Rear Rack Row**
Nut drivers, large shanks

**Middle Rack Row**
Small shanks, multi driver

**Front Rack**
Pliers, cutters

**Front Pockets**
Hex key sets, accessories

# Single Strap System

## Wear It Across Your Chest

This new bag strap is **different and easier** than a typical two strap backpack.
The single large strap distributes the load across your chest.
Slip your bag onto your shoulder, **NOT** over your head.

### 1. RIGHT SHOULDER

Slip your right arm through the opening between the shoulder strap and support strap.

△ DO NOT place strap over your head.
△ DO NOT disconnect the small support strap.

### 2. SNAP

Bring up the big hanging buckle to snap it into the main should strap.

### 3. CINCH

Cinch the shoulder strap nice and tight!

**See back for directions on switching to left shoulder.**

***That's it!***
