

i-Vu® Building Automation System ZS Duct Sensors

The Carrier communicating ZS duct sensors line is designed to measure the air temperature and/or humidity in ductwork. All duct sensors feature closed cell foam to seal the insertion hole and to absorb vibration. Mounting tabs allow for easy installation onto the wall of the duct. The units are built to withstand high humidity and condensation environments.

The ZS duct sensors connect directly to the dedicated sensor network (Rnet) of a Carrier i-Vu controller. This communicating sensor network supports up to 15 ZS sensors through a single port, eliminating the need to consume multiple inputs on the controller.

The communicating ZS duct sensors are available in different models, including temperature only, temperature plus humidity, and temperature averaging.
